

AIM-T

Automatic Inventory Management

**Tamper
Resistant!**

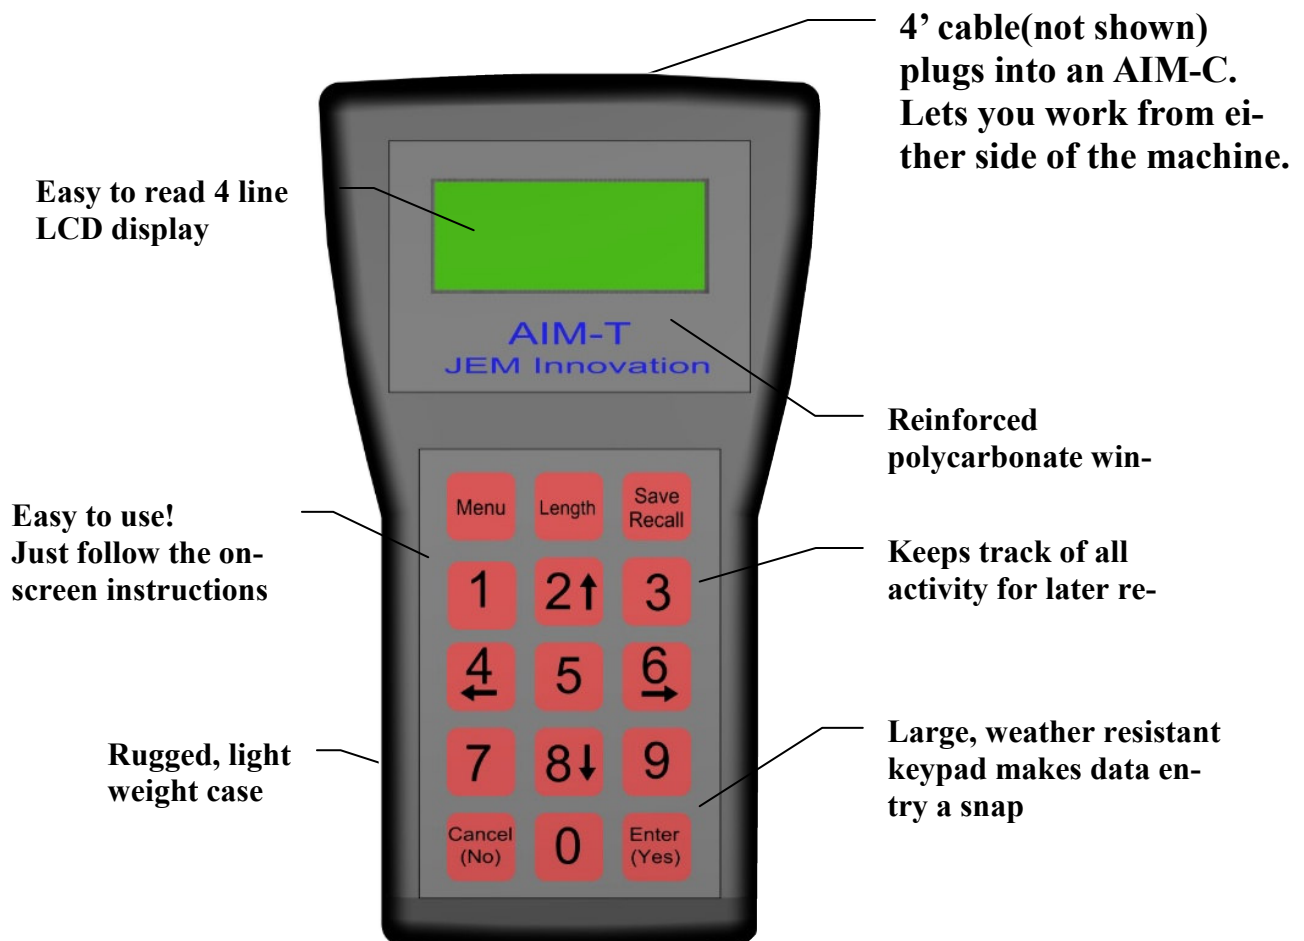

AIM-T

The AIM-T handheld terminal plugs into the AIM-C and gives you full control over the machine. Just enter the desired length and press the machines “start” button. The AIM-C will stop the machine at the right length.

Track material by:

- Job number
- Operator ID
- Date and time
- Restrict access by requiring passwords
- Track running times
- Store/recall cut lists for repetitive jobs
- Audit estimates

The AIM-T will also let you:

- | | |
|---------------------------|-------------------------|
| Change date and time | Setup user ID's |
| Read all run logs | Setup user Passwords |
| Check alarm status | Check machine run times |
| Store/recall cut lists | |
| Clear alarms (owner only) | |

**Helps protect your machine!
You can setup the AIM system to shutdown if the proper password or user ID isn't entered!**

What if it gets lost or stolen, will we lose all our data?
No, all data is actually stored in the AIM-C that is bolted to your machine! The AIM system uses non-volatile memory, meaning it doesn't need power or a battery to keep track of length totals or alarm conditions.

What if it has a glitch? Will my machine run wild?

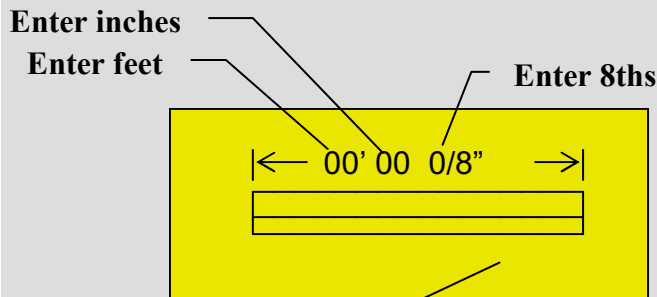

No, the AIM system can only shut off your machine (just as if you hit the 'Stop' button). It can not start the motor! To get things going, enter the desired length and then you must press the existing "Start" switch on the control panel of the gutter

Do I need have to an AIM-C ?

Yes, you must have an AIM-C installed by an authorized distributor or machine manufacturer.

Can I install the AIM-T myself?

Yes. It plugs into the AIM-C with simple twist lock connector.

Sketch shows gutter as viewed from above.

Custom options are available! Contact the factory for metric units, 12VCD, GPS interface, printers, wireless networking or anything else you can dream up.

Sample screen shown approximately actual size.

Pricing: (Package discounts available!)

Item	Description	List price
AIM-C	Stand-alone inventory management computer	\$349
